Manual Battle Draw

How to start a game:

To start a game, you must do the following things:

- If not yet done, install Java (21 or newer)
- Start a server
- Start clients (in the same network as the server)
- Join the same lobby, decide on what settings to use, and start the game. ### Steps to Run:

1. Open a terminal or command prompt.
2. Navigate to the project directory.
3. Build the JAR file with Gradle:

   ```
   ./gradlew build-cs108
   ```

4. Change to the `build/libs` directory:

   ```
   cd build/libs
   ```

5. Start the server (once):

   ```
   java -jar Battle_Draw.jar server <port>
   ```

   Example:

   ```
   java -jar Battle_Draw.jar server 8989
   ```

6. Start a new player instance:

   ```
   java -jar Battle_Draw.jar client <ip>:<port> <username>
   ```

   Example:

   ```
   java -jar Battle_Draw.jar client localhost:8989 JohnDoe
   ```

Account

After successfully connecting to the server with a username, a window will appear.

- You can log in if you already have an account or create a new account.
- If the username is already taken, a slightly altered one will be automatically generated for you.

Lobby

- You can create a new lobby and become the host. The lobby name will automatically be set as `Lobby_of_Username`. This way, other players can easily identify the host.
- If you don't want to create a new lobby, you can join an existing lobby. Simply click the "List Lobby's" button to see all currently open lobbies. Choose one from the list to join the game. You can do this by pressing the "join lobby" button and entering the username of the lobby you want to join.
- Once you're in a lobby, the host has the control to start the game. Make sure everyone is ready before proceeding!

Host Controls:

- The host can select the number of rounds to be played by choosing from a dropdown menu.
- The host can also set the time limit per round using another dropdown menu.
- After configuring the settings and ensuring all players are ready, the host can click the "Start" button to begin the game.

Additionally, you can view the list of online players by clicking the "List Online Players" button, allowing you to see who's currently connected.
If you wish to change your display name, simply use the "Change Username" button.
To track your progress and compare with others, check your highscore by clicking the "My Highscore" button.

Game

- Above the drawing area, you will see the theme and the remaining time displayed.
- You have access to various colors and brush sizes to create your drawing. You can choose from a predefined color palette or create a custom color using the HSB, RGB, or Web format. Additionally, you can adjust opacity and brightness for finer control over your artwork.
- The game round ends automatically when the timer expires.

Rating Phase:

- After the drawing phase, the game moves to the rating page:
  → Here, you rate other players' drawings on a scale from 1 to 5.
- It is crucial to submit your rating within the given time. If you do not rate a drawing before the timer runs out, the game will automatically assign a rating of 5 to that drawing.
- The rating phase ends automatically when the timer expires.

Game Flow:

- Once the rating phase ends, the next drawing will be displayed.
- At the end of all rounds, the player with the highest total rating wins the game.

Figure 2: Screenshot of the game

- After the game concludes, you can either play another round or return to the start screen.

💬 Important Commands (Chat Commands)

`/whisper <name> <Message>`

→ Send a private message to a player.
Example: `/whisper JohnDoe Hey, nice drawing!`
